

## LEED® MATERIALS AND RESOURCES CREDITS

PROJECT:	
DISTANCE: Thomasville, PA to	Miles =

WORKRITE® Packaged Cements for Masonry contain products from one or more of the following locations:

Thomasville, PA      miles | Bath, PA      miles | Genoa, OH      miles

### Regional Materials: LEED® Materials and Resources Credits 5.1 and 5.2

The purpose of these credits is to increase demand for products that are extracted and/or manufactured within the region, supporting the use of local resources and reducing transportation environmental impacts. To qualify for this credit, the location of the project must be within a 500 mile radius of the manufacturing facility.

By mass, 94% or more of the component materials of WORKRITE Packaged Cements for Masonry are extracted and harvested within a 500 mile radius of the WORKRITE Thomasville plant, located in Thomasville, PA 17364.

### Recycled Materials: LEED® Materials and Resources Credits 4.1 and 4.2

The purpose of these credits is to increase demand for products that utilize recycled-content materials, reducing the demand for virgin materials. To qualify for these credits, products must use materials with recycled content so that the sum of post-consumer recycled content plus one-half of the pre-consumer content constitutes at least 10% of the total value of the materials (based on cost) in the project for the MR 4.1 Credit and 20% for the MR 4.2 Credit.

Under the current interpretation of Credit 4.1 and 4.2, the recycled content of WORKRITE Packaged Cements for Masonry is as follows:

- 7.5% Pre-consumer
- 0% Post-consumer

The remaining percentages of composition are considered proprietary information and will not be disclosed.
